Project 2 proposal

9/22/16

   For my project 2 I would like to give back to a program that has helped me through my college career and is the reason I am here at Marist today. The Special services program here at Marist. I have recognized that my learning specialist struggles with her job because the program is very outdated and doesn't know go electronic. That's why I would like to create a database for her that makes it easy to keep track of her students. Maryellen my learning specialist struggles with keeping track of her students seeing she has at least 5 in each academic year. She has to keep track of each ones major, minor, learning disabilities/weaknesses and strengths, goals, schedule, passwords and extra-curricular activities. I would like to create a database that could make this easier for her. Having separate folders for each student that both the student and the specialist can access that makes it easier for them to be on the same page. Every week me and Maryellen work on my reminders; my reminders are a master syllabus that we talk about what I need to do when to keep on top of my work and it is extremely helpful to my college career and after our weekly meets she emails me a list of them and I was thinking how much more efficient it would be if we could both update the reminders whenever we wanted to. I want to make a database that makes it possible for my specialist to open a folder for each students then it will present her with my schedule and my existing reminders and regular meeting time. Then she can write up what we did while in the meeting and the database will have to keep track of what Maryellen does mostly with each student such as writing help, reminders, planning schedule and she can see how much of her day is spent doing what.
